HTI Consultants Welcomes HIPAA Expert Jami Montana to The Team

*Leading Unified Communications
Provider Adds Strong Member to Team
to Support Healthcare Providers*

New Jersey — July 31, 2017 – High Tech Innovations (HTI), a leading provider of unified communications, announced today that the company has brought Jami Montana onto the team, in order to take HTI’s services to the next level. HTI is a technology advisor and managed service provider to the healthcare industry and the addition of Montana to the staff is to further support healthcare organizations who are facing stern HIPAA (Health Insurance Portability and Accountability Act of 1996) regulations. This important piece of United States legislation enforces data privacy and security provisions for safeguarding healthcare information. While most healthcare professionals want to protect their patients’ private information in the proper manner, many healthcare organizations find themselves uncertain regarding which technology is required to keep them compliant with HIPAA regulations while ensuring that the technology they use is also cost-effective. This is the exact reason why HTI has brought Montana onto the team.

Her expertise with HIPAA will help HTI’s customers avoid five-figure penalties and six-figure fines from the federal government, as well as help clarify the steps necessary to reach the peace of mind that comes with following this regulation.

For healthcare organizations to be in HIPAA compliance, healthcare providers need to assess three main areas of their operation. Montana states, “First, our customers need to assure that they have all of the proper technical controls in place. For example, does the organization have a proper firewall in place? Does the organization have a solid data backup plan? Second, they need to make sure that they have the proper administrative controls. For example, does everyone have administrator rights on the network or are employees properly limited by access level? Lastly, when it comes to the overall security of their organizations, healthcare providers need to assess their physical controls. Do they have modern security systems, office surveillance and device tracking in place?”

HTI’s three-piece approach, helps organizations assess the risks and opportunities for each slice of

the pie (technical/administrative/physical). Once an organization has properly protected themselves in all three areas, it becomes very simple for them to operate securely, while remaining in compliance with HIPAA regulations.

Montana is no stranger to the industry and she brings a multitude of technical certifications to the team, including her CHCSP (Certified Healthcare Cyber Security Professional) CHSP (Certified HIPAA Security Professional) and her CPCIP (Certified PCI DSS Security Professional) Certifications, which revolves around security frame works as well as payment and credit card processing security qualifications. Her impressive experience bolsters HTI’s already impressive technical staff. Montana’s main area of expertise is in HIPAA, which is vital for HTI’s customers because that is their primary challenge. In fact, Montana has been partnered with HTI for years, providing support to its customers while simultaneously setting the foundation for strong relationships in the years to come. “I’m thrilled to have formalized this longstanding partnership. As someone with a small-town

upbringing, it's a pleasure to be part of an organization that prides themselves on capability, integrity and service," states Montana.

Montana adds, "Through our solutions, our customers are so well-protected that in the event of a HIPAA audit our clients can literally pick up the phone, call us and our team of experts will handle all interactions with the Department of Health and Human Services, while our customers continue to serve patients. Our solutions can provide all necessary documentation to show how our clients are fully in compliance."
