## High Tech Innovations, LLC Helps Healthcare Providers Enhance Network Security Through Managed IT Services

### *Proactive Approach to IT Enables Local Practices to Combat Threats*

NEW JERSEY — September 2019 — High Tech Innovations, a leading managed technology services provider, announced today that its proactive approach to managed services enhances security and helps healthcare practices combat malicious threats. While the necessity for IT security is in plain sight, many small to mid-sized practices may ignore this area of their business until it's too late. High Tech Innovations, LLC's managed IT services provides proactive resources to practice owners everywhere. The company zeroes in on five key areas to focus on, to dramatically improve the health of their customers' technology.

In its purest form, High Tech Innovations, LLC's managed IT services anticipate IT issues before they crop up. It's a proactive and cost effective approach that has changed the way practices improve their productivity, streamline their efficiency and keep their critical information safe. This approach enables practice owners to stay focused on their core competencies, instead of trying to understand the complexities of IT networks. There are five critical areas where High Tech Innovations, LLC leverages their proactive approach to enhance security.

**1) Anti-virus/Anti-malware.** Most viruses spread so fast because they are delivered in the simplest ways. Viruses are usually deployed through email, software downloads or phishing sites. High Tech Innovations, LLC regularly monitors virus protection so the latest threats can be combatted.

**2) Data Backup.** If you've ever lost your data, your presentation or a file went missing, you've felt the sting of a lacking data backup program. While most practices have partial backups in place, High Tech Innovations, LLC provides healthcare providers with business continuity and disaster recovery programs in order to eliminate this problem from their IT landscape.

**3) Software Updates.** If you've ever snoozed a security update, you've potentially put your practice at risk for greater harm. High Tech Innovations, LLC team of technicians work around the clock to instantaneously and continuously update software so practices are always on the latest version.

**4) Unauthorized Users.** Keeping unauthorized users out – of buildings, software programs and internal networks – is another vital component for a comprehensive data protection program. Leaving these areas unprotected is irresponsible as leaving your doors unlocked at night. High Tech Innovations, LLC monitors activity constantly to prevent any unauthorized access.

**5) Image Level Backups:** If your practice experiences a natural disaster or falls victim to malware, you can restore the image backup prior to the event and pick right up where you left off. With HTI's image-based backups this can happen quickly and with minimal downtime and your practice remain in operation no matter what challenges you face.

“When a healthcare practice takes the time to assess these areas of their

business, it's very easy to dramatically improve the health of their technology,” said Javed Uddin, Founder & CEO of High Tech Innovations, LLC. “We are very well versed in these areas and can bring years of expertise and experience to the table. The modern practices can simply not afford to ignore these areas of their business any longer and by partnering with us we can prevent a catastrophic event.”
